

FREE TRANSLATION OF ATTACHMENT XIII OF RDC 72/2009 – ANVISA

CHECKLIST FOR SANITARY INSPECTION

1	- IDENT	IFICATI	ION
1.1 – Name of Vessel		1	
1.2 – IMO:			
1.3 – Name and signature of master or de	esignated	l officer:	
	YES NO		Corrective Action
		FOOD	
2.1 – STORAGE OF FOOD – Stores / P	Pantry / P	rovisions	3
2.1.1 – Good Storage Practice			
Are all products labeled or identified			
such that their industrial and			
inspected origins are defined?			
Are the stored products or foodstuffs			
within the validity established on the			
packaging and do not present			
alterations or apparent suspect			
situations such as bad odor, altered			
texture, presence of stains, etc?			
2.1.2 – Sanitary - Hygienic Conditions			
Are the raw materials, ingredients		1	
and packages stored on pallets,			
raised platforms or shelves with a			
minimum necessary spacing required			
to guarantee adequate ventilation,			
cleaning and, when the case may be,			
disinfecting of the area?			
Are the utensils/equipment			
impermeable, corrosion resistant,		-	
easily cleansable and made from non			
toxic material in an adequate state of			
maintenance and functioning? Do			
the doors have automatic closing			
appliances?			
Is the area well illuminated, with			
adequate drainage and ventilation?			
Are the flooring, bulkheads,			
deckheads, doors and frames without			
accumulated dirt and is the area well cleaned?			
2.1.3 –Food Safety	l	-	
Are the food products protected from contamination and identified with, at			
containination and identified with, at			

CASTRO& HENDERSON ADVOGADOS ASSOCIADOS

		100	
least, the following information:			
product name, manufacturer and			
validity expiration date?			
Do the cold storage chambers have			
visible thermometers and are they			
functioning adequately?			
Is the food temperature in			
accordance with the manufacturer's			
recommendations? Is the storage			
0			
temperature monitored on a regular			
basis and recorded (records available		11	
for perusal by competent authority)?			
Are the products or foodstuffs placed			
in an organized manner and, if			
possible, separated by type or group			
such as: vegetables x meats x fish x			
cold products x ready for			
consumption?			
2.2 – GALLEY	L1		
2.2.1 – Personal hygiene and health of	food hand	llers	
Adequate personal cleanliness: Are			
hands clean, nails short, (no varnish,			
no rings, bracelets, ear rings, etc)?			
Are food handlers without beards or			
using a mask, with hair covered?		_	
Safe hygienic habits: Are hands well			
cleaned before handling food,			
especially after any interruptions or			
after using bathrooms?			
Do food handlers practice acts that			
might contaminate food such as			
manipulate money, garbage bin			
covers* , dirty objects, etc.?			
Does the vessel have posters			
showing food handlers the correct			
way to clean hands and other			
hygienic habits, affixed at			
appropriate locations?			
Use of Protective Clothing: Are			
butcher gloves, thermal overalls,			
and/or thermal protection gloves			
used?			
Are exclusive changing rooms for			
the production area clean and			
maintained?			

Is there an absence of skin problems, wounds and festering; absence of symptoms related to respiratory, gastrointestinal and ocular infections? Is periodic supervision of the state of health of the food handlers carried				
out?				
Are there records of tests carried out.				
3.2.2 – Potable Water Supply	r	r		
Is there available flowing water,			10	
preferably hot and cold?				
Are the taps clean and maintained?				
Is there water on offer within				
required standards for potable water?				
Are there lavatories in full working				
conditions with hygienic automatic				
activation and supplied with				
inodorous antiseptic liquid soap and				
paper towels?				
3.2.3 – Galley Waste Management			-	
Are the garbage bins made of easily				
cleaned and transported material,			1.1	
clean and identified for the type of residue?				
Are the garbage bins lined with				
resistant plastic bags?				
Are the residues frequently removed				
from the galley thus avoiding				
becoming a source of				
contamination?				
3.2.4 – Cleanliness and Disinfection of	f the G	allev		
Are there written procedures				
available for the relevant crew on				
duty?				
Are the hygiene products labeled and			11	
stored in exclusive storage or a safe				
place?				
Are the hygiene products used as per				
manufacturer recommendations				
(time of contact and method of				
use/application, etc)?				
3.2.5 – Food preparation				
Is the food production line				
appropriate to minimize the risk of				

cross contamination (separation of			
clean and soiled areas)?			
Are extraneous, decomposed or toxic			
materials (cardboard boxes, plastic			
bags, brooms, rags, etc. or any other			
object that has not been or cannot be			
properly cleaned) absent from the			
galley?			
Are the fruit, vegetables and			
8			
preparation or placed for		10.0	
consumption? Are the cleaning			
materials labeled, within their			
validity period and used as per			
manufacturer's instructions?			
3.2.6 – Hygienic – Sanitary Conditions			
Are the structures within the galley			
adequate (smooth surface walls, in a			
sound condition and easy to clean;			
non-slip flooring; and movable			
equipment)? Are utensils with			
surfaces in contact with food:			
smooth surfaced, intact, impervious,			
corrosion resistant, easily cleaned			
and made of non contaminant			
material)?		1.1	
Is the food conservation equipment			
(refrigerators, freezers, cold storage			
chambers and others) as well as			
<i>,</i>			
1 1			
processing in adequate working			
condition and presenting a			
temperature measuring gauge?			
Is the galley in a good state of			
hygiene: utensils, equipment,			
surfaces, walls, ceiling and others?			
3.3 – MESS ROOMS / RESTAURAN	Τ		
Structural conditions: Is the			
equipment and furniture impervious,			
resistant to corrosion, easily cleaned			
and made of non toxic material; in a			
good state of maintenance and			
functioning? Are the areas well			
illuminated and aired?			
Is the mess room in a good state of			
is the mess room in a good state of			

hygiene? Are the utensils,				
equipment, surfaces, walls, ceiling				
and others all clean?				
If a self service system is used, are				
the time and temperature of foods on				
offer recorded? Are the records				
available to the competent				
authorities?			100	
	L FAC	ILITI	ES – S	HIP HOSPITAL,
Are the areas meant for examination				
and treatment of travelers (crew				
and/or passengers) segregated from				
other activities? Are the areas well				
illuminated, clean and with available				
potable water?				
Are there lavatories in full working				
conditions with hygienic automatic				
activation and supplied with				
inodorous antiseptic liquid soap and				
non recycled paper towels?				
Are the sharps (needles, scalpels,				
etc) placed in rigid and identified				
receptacles that offer safe handling?			11	
Is the potentially infectious waste				
(blood, faeces, vomit, etc) dealt with				
and identified in accordance to			1.1	
applicable legislation?				
Are the attendance records well				
organized, legible, up to date and				
available for perusal at any time? Do				
the records register the name,				
symptoms, rank or function,				
medicine given or diagnosis				
affected, as well as age, cabin				
number, date/time start of illness?				
	5. –	QUA	RTERS	5
Are the taps, toilet flush and drains				
in full working order?				
Are the cabins clean, without dirt				
accumulation or shelter for insects or				
other animals?				
6. – POTABLE WATER (w	vater us	sed for	r baths.	, tooth brushing, ingestion, etc)
Does the water meet potable				
standards (chlorine should be				
maintained between 0,2ppm and 2				
maintainea between 0,2ppm and 2		I		

					nom at any point on otter) and
					ppm at any point on offer) and
					sanitary hygienic conditions? Is the
					water quality maintained with
					correction / control of the chlorine
					level?
					Is the water reserve compatible with
					the quantity of travelers on board? Is
					it separated from sources of
					contamination (distant from
					effluents, solid residues or toxic
					1 / I
					competent authority (if Brazilian)?
	NING	DITIO	CONI	– AIR	7.
					The air conditioning system
1					components of the vessel must be

					Are maintenance, operation,
					cleanliness and disinfection
	NING				products) and does not present leakage? Is the disinfection of the water storage done periodically using labeled products registered with the competent authority (if Brazilian)? 7. The air conditioning system components of the vessel must be kept in a good state of maintenance, operation, control and cleanliness. The changing of filters must be carried out as per manufacturer recommendations, lacking which the filters are to be changed every six months. No objects are stored in the AC unit (which should be exclusively for the AC system). External air collection is protected from potential sources of pollution by means of a filter (not applicable if the mixture of supply and exhaust occurs after the AC unit filter). Are air quality tests carried out ever six months (valid only for systems with a total capacity of 60.000BTU and are they within the standards of RE nr. 09 dated 16/Jan/2003 and amendments? Are the reports available for the health authorities to peruse? Are maintenance, operation,

CASTRO&
HENDERSON

	-			
system equipment recorded on				
spreadsheets and made available to				
the competent authority?				
	8	- SEW	AGE	
Is the system compatible with the				
number of travelers on board? Is it in				
a full working condition (without				
visible flaws or leaks), with closed			100	
service valves, aeration turned on,				
grinder working, filters and return				
lines unobstructed and disinfection				
system working as per manufacturer				
specifications)?				
Are the disinfection products used				
labeled as registered with competent				
authorities (if Brazilian)? Are they of				
a quantity compatible with the			6	
frequency of maintenance? Are they				
stored adequately?				
Is the sewage system certified				
(MARPOL –Sewage Pollution				
Prevention)? Is the system in use the				
same as the one described in the			1	
International Sewage Pollution				
Prevention Certificate without				
significant alterations in the				
installation, arrangement or				
material?				
If a liquid product is used for				
disinfection same should have its				
active ingredient described on the			-	
label as well as completely control				
and eliminate pathogenic			1.1	
microorganisms.				
9. –	WAST	E MA	NAGE	EMENT
Are solid wastes stored safely? Are				
the waste storage places and				
containers clean, without				
accumulated dirt? Are the containers				
or bins intact, non absorbent, easily				
cleaned, resistant and fitted with a				
tight cover?				
Is the incinerator or other treatment				
system functioning and in a good				
hygienic condition? Do those				

responsible for its operation wear protective clothing in an appropriate manner?				
	RESEI	RVOI	RS (IN	SECTS / RODENTS)
Are there any shelters/nests/places for vectors or other disease transmitting animals? Is there any standing water which may serve as a				
habitat for insect larvae?				
Are rodents / insects absent from the vessel, as well as signs or traces of their presence?				
Does the vessel have an integrated control and monitoring program for vectors / reservoirs that determines responsibilities, frequency of				
periodic visits to critical areas, monitoring of infestation by using of traps – for flying and crawling insects – as well as control action –				
disinsection and deratting?				
	11. – C	REW	HEAI	ТН
Are the crew exposed to risk factors			18	
that could become a health hazard?				
Does the crew have at their disposition the protective equipment required for the carrying out of their activities in a safe manner? Are they instructed as to the correct manner in which to use said equipment?				
12. – BA	ATHR	DOMS	S AND	TOILETS
Are the toilets clean, maintained and functioning perfectly?				
Are liquid soap, paper towels and appropriate bins for paper discharge (for toilets the bin is to have a lid and be lined by plastic bags and always clean) available?			(
	13. – C	THE	R ARE	AS
Engine room: clean, with accumulated dirt on utensils, equipment, bulkheads, surfaces, ceiling etc.				
Is the Deck clean and organized so as to prevent possible injuries to				

travelers? Are extraneous, toxic or		
wasted materials absent?		

OBS - garbage bin covers* - ANVISA have been know to expect to see "pedal activated" bin covers in the galley and ship hospital.
